Environment and Energy Usage Policy

Environmental and energy policy is an emerging discipline within the social sciences. In response to our social responsibilities and impacts on the natural environment, environmental and energy policy seeks to better understand human decision-making that directly or indirectly affects our natural world. Environmental policy can include laws and policies addressing water and air pollution, chemical and oil spills, smog, drinking water quality, land conservation and management, and wildlife protection, such as the protection of endangered species.

The main goal of environmental policy is to regulate resource use or reduce pollution to promote human welfare and/or protect natural systems. The main function of environmental policy is to, through government action, minimize the environmental impact on the society.

The institute has followed the Environment and Energy Usage Policy by taking following initiatives:

- Emphasis on Cleanliness Campaign
- Celebration of World Environment Day
- Installation of Solar System in the Campus
- Removal of Plastic Campaign
- Following the motto 'Clean, Neat and Green Campus'
- Awareness Programme on the Dangers of Climate Change
- Sign boards showing environmental awareness
- Dustbins, LED lights, dust free campus, proper ventilation in the classrooms

The Camus Development Committee of the institute has to look after the initiatives taken by various committees under the keen observation of IQAC. Keeping in mind the motto and objectives of environment policy and energy usage, the students are made aware with various activities related to green and clean campus. Every year, the World Environment Day is celebrated by organizing various activities/ programmes like tree plantation, quiz competition, elocution competition etc. NSS units of the college plays vital role by motivating the students of the institute. In the special camp, more weightage is given to fulfill international criteria of environment policy. Under Unnat Bharat Abhiyan, various programmes are organized in the five selected villages of the surrounding area.

In order to have sensor-based energy conservation, the institute is having two facilities: (1) sensor-based water cut off facility in the over head water tank and (2) section wise MCB auto switches for power interruption. If there is a problem in the electric network such as overload or short circuit conditions in particular section of the building, sensor-based MCB automatically switches off electric circuit of that section only.
